Google Scholar: scholar.google.com/citations?user=23I1CMYAAAAJ

GitHub: github.com/phy710

Homepage: phy710.github.io/

Research Interests

Signal processing, machine learning, computer vision, and image processing.

Education

University of Illinois Chicago

Ph.D. in Electrical and Computer Engineering
Advisor: Ahmet Enis Cetin (IEEE Fellow)

Chicago, Illinois, USA
August 2019 – August 2023

University of Illinois Chicago

Master in Electrical and Computer Engineering

Chicago, Illinois, USA
August 2017 – May 2019

Chang'an University

Bachelor in Automation

Xi'an, Shaanxi, China
September 2014–July 2018

Work Experience

Northwestern University, Feinberg School of Medicine

Clinical Research Associate

Advisor: Ulas Bagci

Topic: Federated learning, domain generalization, eye-tracking-based medical image analysis.

Chicago, Illinois, USA
June 2023 – Present

InnoPeak Technology (OPPO US Research Center)

Engineering Intern

Advisor: Xihua Dong

Topic: Attention-based variable rate super-sampling (VRSS) for graphics rendering.

Bellevue, Washington, USA
May 2022 – August 2022

University of Illinois Chicago, College of Engineering

Teaching Assistant and Research Assistant

Advisor: Ahmet Enis Cetin

Topic: Wildfire detection, ℓ_1 -norm kernel PCA, orthogonal-transform-based neural network layer.

Chicago, Illinois, USA
August 2019 – May 2023

Editorial Services

Associate Editor, Signal, Image and Video Processing (SIVP), Springer

June 2023 – Present

Selected Honors and Awards

UIC Graduate Student Award for Exceptional Research Promise

May 2022

Teaching Experience

Teaching assistant at University of Illinois Chicago

ECE 266: Introduction to Embedded Systems

Fall 2019

ECE 317: Digital Signal Processing I

Spring 2020, Summer 2021

ECE 407: Pattern Recognition I

Spring 2022

ECE 415: Image Analysis and Computer Vision I

Fall 2020, Fall 2021, Fall 2022

Selected Research Projects

Federated Domain Generalization for Medical Image Analysis

June 2023 – Present

The goal of this effort is to develop a Federated domain generalization for medical image analysis tasks. We improved the main-stream Fourier-transform-based domain generalization using a soft-thresholding function. The innovative nature of the soft thresholding fused with Fourier-transform-based domain generalization improves neural network models' performance by reducing the target images' background interference. Preliminary work is presented in [A8].

Eye-Tracking-Based Medical Image Analysis.

February 2023 – Present

The goal of this effort is to develop an AI system to integrate computer-aided detection and diagnosis systems with radiologists' perceptive knowledge and patterns via eye-tracking. Preliminary work is presented in [C10].

Orthogonal Transform Based Neural Network Layers

March 2021 – April 2023

We proposed a family of orthogonal-transform-based novel neural network layers to replace the convolutional layers in the convolutional neural networks. The idea is from the convolution theorem, which states that convolution in the time/spatial domain is equivalent to multiplication in the frequency domain (transform domain). Compared to the conventional convolution neural layer, our layers contain much fewer parameters and computational costs, but the image classification accuracy on the benchmark datasets such as the CIFAR-10 and the ImageNet-1k of our revised networks is comparable to or better than the conventional convolution neural networks (ResNet, etc.). Related peer-reviewed papers include [J4, C3, C5, C6, C8, C9]. Specially, in [C9], we present the relationship between the Hadamard-transform-based layer with the quantum computation.

L_1 -Norm Kernel PCA

March 2021 – December 2021

We proposed a family of ℓ_1 -norm kernel principal component analysis (PCA) methods. Compared to the conventional PCA method, our methods are computationally efficient because they are multiplication-free and more robust because they employ Mercer-type kernels that induce the ℓ_1 -norm. We further proposed ℓ_1 -norm kernel power iteration methods using the same kernel. Related peer-reviewed papers include [J5, C2, C4].

Neural Network Based Wildfire Detection

May 2018 – January 2021

We designed a real-time wildfire detection model using MobileNet-V3. We deployed the model on an NVIDIA Jetson Nano as a real-world application. We have tested our system on the HPWREN wildfire surveillance database and obtained satisfactory results. Related peer-reviewed papers include [J1, J3, C1].
